

VACUUM BRAZING

edwardsvacuum.com

WHERE IS VACUUM USED?

Brazing is a process to join metals by flowing a thin layer of non-ferrous filler material into the space between the metals. The intimate contact produced by the dissolution of a small amount of base metal and the molten filler metal results in bonding without the fusion of the base metal.

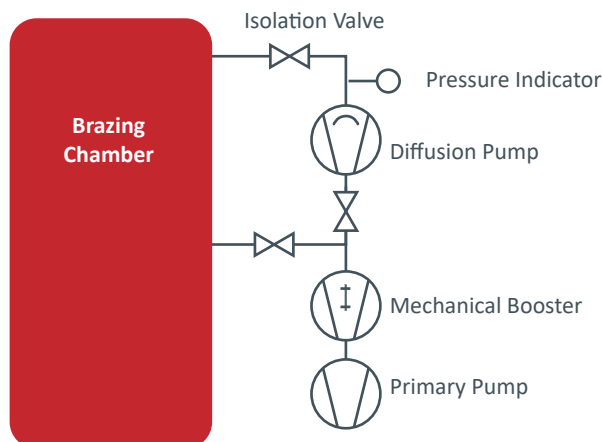

Vacuum aids this process by removing all the gases in the brazing area and improving the metal wetting properties. Vacuum plus high temperature results in decomposing oxide layers.

The brazing process consists of a pump down to 10^{-3} mbar and heating in different steps; vacuum is maintained below 10^{-4} mbar during heating.

TYPICAL VACUUM BRAZING SYSTEM

Historically, oil-sealed pumps and diffusion pumps are used in the brazing process. More recently, dry roughing pumps and turbomolecular pumps, duly protected from radiated heat, have become the preferred technology, especially when the cleanliness of the final product is instrumental.

Typical layout for vacuum brazing

SOLUTION

Dry pumping systems – Recommended technology

GXS dry screw pumps and booster combinations

High throughput STP series

STP pumps with integrated controller

Oil-Sealed pumping systems – Conventional technology

Stokes Microvac rotary piston pumps with EH and 6" Stokes booster combination

nHT series diffusion pumps

EDWARDS BENEFITS

GXS DRY SCREW PUMPS

160–750 m³/h primary pumps offer pumping speeds of up to 3,450 m³/h with vacuum boosters. Equipped with an intelligent on-board controller with extensive communication and automated control capabilities, these dry pump systems substantially reduce maintenance and operating costs.

Benefits:

- Increased tolerance to particles created by the brazing process
- Clean residual vacuum
- Elimination of oil back streaming, a source of product and/or furnace contamination
- Large water vapour pumping capacity aids the drying of the new chamber lining
- Elimination of oil mist at the exhaust and external oil leaks

Highly reliable

Ability to handle harsh processes

Low maintenance cost

No unplanned down time

Increased productivity

Longer intervals between services

Safe operation, consistent output

Automated control of your process

STOKES MICROVAC ROTARY PISTON PUMPS

Packaged with the EH range or 6" series of mechanical boosters. When oil sealed technology is used for brazing, piston pumps are the vacuum pumps of choice.

Value for investment

Low rotational speed enables longest pump life cycle

Easy maintenance on site

Robust simple mechanism for high reliability and ease of rebuild

Proven and tested; peace of mind

Over 80 years of time-tested proven performance

EM TWO STAGE ROTARY VANE PUMPS

EM Series pumps are rugged, mechanical oil-sealed pumps with a compact and noise-free design. They feature advanced lubrication circuits, high reliability and accessories to suit your specific application needs.

Flexible and reliable

Compact in build and packing a punch, these pumps are available as free-standing units that are easy to deploy.

Easy to install and maintain

Pumps equipped with an integral IEC connector. O-ring sealed sight glass simplifies the inspection of oil level and condition.

Built-in protection systems

Automatic reset and restart when the motor cools down – no manual intervention.

STPs TURBOMOLECULAR PUMPS

Our magnetically levitated turbomolecular pumps are available in a range of up to 4,500 ls⁻¹ and offer a multi-axis bearing system. The rotor is entirely suspended by magnetic bearings; so, all contact between the rotor and the rest of the pump is eliminated.

Increased productivity

Quicker pump down to base pressure

Low cost of ownership

Low power and utilities consumption

Economical

Maintenance free

nHT SERIES DIFFUSION PUMPS

The nHT series diffusion pumps have been designed for optimum heat transfer to the oil, resulting in faster heat up and a significant reduction in energy consumption.

Increased productivity

High-throughput pumping

Stable performance

High backing line pressure

Better end product quality

Low oil back streaming

Clean process

Stainless steel body
